1. Introduction

What Scaleezy Boutique CRM is

Order-management and CRM software for businesses that cut and stitch every garment to one client's measurements — bridal boutiques, saree houses, blouse specialists, designer ateliers.

It replaces the notebook, the WhatsApp thread and the whiteboard with one record per order that the owner, the master tailor, the stitching tailor, the designer and the customer all read from.

What it solves

Problem	What the product does
Measurements live in a notebook	Per-garment measurement sets stored against the customer, versioned
"Which tailor has this order?"	Every order names a supervising Master and a stitching Tailor
"Where is my garment?"	15 production stages, each timestamped, visible to staff and the customer
"How much fabric is left?"	Stock ledger; every movement recorded, reservations against orders
"Has this client paid?"	Advance / balance / paid, per order, with an invoice
"Any update?" (customer, daily)	A public tracking link and pre-composed WhatsApp updates

Supported user roles

Owner · Master Tailor · Stitching Tailor · seven production specialists · Designer · End customer (no login) · Platform Super Admin.

High-level business flow

```
Boutique signs up → own isolated database schema created
↓
Staff added (Masters, Tailors, Designers) → each gets a login
↓
Fabrics + inventory stocked
↓
Customer created → Order created (1..n garments)
↓
Per garment: measurements · design · fabric · materials · price
↓
Master + Tailor assigned → Advance payment recorded
↓
15 production stages, each owned by a role
↓
Finished-garment photos published → Balance paid → Delivered
↓
Customer follows the whole thing on a public tracking link
```

Multi-tenancy is real: each boutique's data lives in its own PostgreSQL schema. Two boutiques on the same server cannot see each other's customers, prices or patterns.

2. Getting started

System requirements

Item	Requirement
Browser	Any current Chrome, Edge, Safari or Firefox. The workspace is a React SPA.
Screen	Works from 390 px (phone) upward — see §25
Network	Always-online. There is no offline mode.
Account	One boutique account per business; staff logins are issued by the owner

Where the application lives

Surface	Path
Public website	/
Boutique workspace	/app.html
Platform console	/superadmin.html
Customer order tracking	/track/<token>/ — served by Django, no sign-in

Signing up a new boutique

Figure 1 — The public site

Landing page

embroidery, customisation and tailoring charges.

[Read the full explanation →](#)

THE PROBLEM

The order is in three places, and none of them agree.

A register at the counter. A measurement book with the cutting master. A WhatsApp thread with the customer. When the bride calls to ask if her blouse is ready, someone has to walk to the back and find out.

Measurements on paper

Orders in a register

Status only the tailor knows

Trial dates missed

Balance payments forgotten

Fabric counted by memory

"Is it ready?" — five times a day

EXPLORE THE PLATFORM

Six modules. One connected atelier.

Every module writes to the same record, so a measurement taken at the counter is the measurement the cutting master works from.

01

Clients & measurements

A permanent profile for every client, with the measurement ledger that made their last garment fit.

02

Orders & lifecycle

Every order moves through named stages with an owner, a clock and an SLA on each one.

03

Production floor

Task queues for the people who do the work, with priorities and a quality gate before dispatch.

04

Design studio

05

Fabric & inventory

06

Customer updates

Landing page (continued)

Design studio
 Collections, design assets and reference boards, with an approval step before anyone cuts fabric.

Fabric & inventory
 Know what is on the shelf before you promise it, and what a garment consumed after.

Customer updates
 A tracking link the client can open without an account, and messages you send from your own number.

[See what each module does →](#)

THE FLOW

Eight stages, from counter to doorstep.

Every order carries its own stage list. Each stage has an owner, a start time, a completion time and an SLA — so a delay is visible on the day it happens, not at delivery.

1 Received Client, garment and measurements captured at the counter.	2 Confirmed Design agreed, costing set, advance recorded.	3 Stylist review Design references and fabric checked before cutting.	4 Design & creation Pattern, cutting, embroidery and stitching on the floor.	5 Quality check QC master inspects against the measurement ledger.	6 Ready for dispatch Pressed, packed, photographed, balance settled.
7 Shipped Courier and tracking number, or counter pickup.	8 Delivered Closed, with the full history kept against the client.				

[Walk through each stage →](#)

YOUR FLOOR, YOUR ROLES

Software that knows a Maggam

Landing page (continued)

Software that KNOWS a Maggam Master from a Cutting Master.

Generic CRM gives you "staff". A tailoring floor does not work that way — each stage only accepts the specialists who can actually do it.

Measurement Master

Takes and verifies client measurements

Pattern Master

Drafts the paper pattern

Cutting Master

Cuts fabric from the pattern

Maggam Master

Runs embroidery before stitching

Stitching Tailor

Assembles the garment

Finishing Master

Hemming and final shaping

Pressing Staff

Presses before dispatch

QC Master

Runs the quality inspection

Master (generalist)

Can work on every stage

[How roles map to stages →](#)

FOR YOUR CUSTOMER

She can check on her own lehenga.

Every order gets a signed tracking link. No app, no account, no password — she opens it and sees exactly where her garment has reached. The calls stop because the answer is already in her hand.

Status messages queue up for you to send from your own WhatsApp number, so the boutique she hears from is still the boutique she knows.

Landing page (continued)

Figure 2 — Sign in

The image shows a sign-in page for SCALEEEZY. At the top left, there is a button labeled "Back to Home" with a left-pointing arrow. The SCALEEEZY logo is centered at the top, with the tagline "YOUR VISION. OUR CRAFT." below it. The main content is a white sign-in card with a green border. The card starts with "Welcome back" and a hand icon, followed by the text "Login to continue your custom creation journey." Below this are two input fields: "Email" with an envelope icon and "Password" with a lock icon and a toggle eye icon. A "Forgot password?" link is positioned below the password field. A large black button labeled "Login to Workspace" is centered below the inputs. At the bottom of the card, a link says "Don't have a boutique account? Signup".

Login

Click **Signup** at the bottom of the sign-in card.

You land on the owner dashboard.

First-time setup order

Do these before taking a real order, in this sequence:

1. **My Account** → boutique name, address, phone, email, logo (they print on invoices and the customer tracking page).
2. **Manage Tailors** → add your Masters and Stitching Tailors.
3. **Manage Designs** → add Designers, then designs.
4. **Manage Fabrics** → your fabric library.
5. **Inventory** → items and opening stock.

3. Roles and permissions

The six roles that can sign in

Role	How it is created	What it is for
Owner	Signup	The business. Full access.
Master Tailor	Manage Tailors, role <i>Master Tailor (generalist)</i>	Supervises the floor, runs most production stages
Stitching Tailor	Manage Tailors, role <i>Stitching Tailor</i>	Stitches; owns the stitching stages
Specialists (7)	Manage Tailors	Measurement / Pattern / Cutting / Maggam / Finishing / Pressing / QC — each owns its own stage
Designer	Manage Designs → <i>Add designer</i> → <i>Grant login</i>	Design library and assigned design work only
Super Admin	Platform-side, not from inside a boutique	Runs the platform across all boutiques

The **end customer never signs in**. They open a signed tracking link.

What each role sees in the navigation

Menu item	Owner	Master	Tailor / specialist	Designer
Dashboard	✓	—	—	—
Manage Orders	✓	✓	—	—
Customers	✓	✓	—	—
Invoices	✓	—	—	—
Analytics	✓	—	—	—
Manage Fabrics	✓	—	—	—
Inventory	✓	—	—	—
Manage Tailors	✓	—	—	—
Manage Designs	✓	—	—	✓ (as <i>Design Studio</i>)
Design Work	✓	✓	—	✓ (as <i>My Work</i>)
My Assignments	—	✓	✓	—
My Account	✓	✓	✓	✓

What each role can do at the API

This is enforced on the server, not only in the menu (`core/permissions.py`):

Capability	Owner	Master	Tailor / specialist	Designer
Read customers, orders, inventory	All	Orders on the floor + their customers	Only orders they are on	No access
Create / edit customers, fabrics, inventory, staff	✓	✗	✗	✗
Advance a production stage	✓	Stages their role owns	Stages their role owns	✗
Assign a stage to someone	✓	✓	✗	✗
Upload / publish finished-garment photos	✓	✓	✗	✗
Master verification checklist	✓	✓	✗	✗
Record payments, edit prices	✓	✗	✗	✗
Boutique settings	✓	✗	✗	✗
Design library	✓	Read	✗	✓

A designer account is refused outright on customers, orders, inventory and settings — the Design Studio has its own permission classes.

4. The public website

A plain static site, built separately from the app (`npm run build`), so it is readable by crawlers. Pages:

Page	Purpose	Screenshot
Home	Positioning, the pitch, sign-in and demo CTAs	01 [common/01-landing-page.png]
What it is	Product explanation	01b [common/01b-site-what-it-is.png]
Modules	Feature areas	01c [common/01c-site-modules.png]
Lifecycle	The order lifecycle, explained for buyers	01d [common/01d-site-lifecycle.png]
For customers	What the end customer gets	01e [common/01e-site-for-customers.png]
Book a demo	Lead capture — leads land in the Super Admin console	01f [common/01f-site-demo-request.png]
FAQ	Common questions	01g [common/01g-site-faq.png]

The two CTAs that matter: **Sign in to your atelier** → `/app.html` , and **Book a demo** → the lead form.

5. Authentication

Signing in

1. Open `/app.html`.
2. Enter the email address and password.
3. **Login to Workspace.**
4. The server finds which boutique the account belongs to and routes you into that boutique's schema.
5. You land on the screen for your role — Dashboard for an owner, ****My Assignments for production staff, My Work**** for a designer.

Wrong credentials

Figure 6 — Rejected sign-in

The screenshot displays the SCALEEEZY login interface. At the top left, there is a 'Back to Home' button. The header features the SCALEEEZY logo and the tagline 'YOUR VISION. OUR CRAFT.'. The main content area is a white card with a 'Welcome back' message and a login prompt. It includes input fields for 'Email' (containing 'kavya@demoboutique.test') and 'Password' (masked with dots). A 'Forgot password?' link is positioned below the password field. A red error message, 'Invalid login credentials. Please try again.', is displayed below the login fields. A black 'Login to Workspace' button is located at the bottom of the card. At the very bottom of the card, a link for users without an account is provided: 'Don't have a boutique account? Signup'.

Invalid login

The message is exactly: *Invalid login credentials. Please try again.* It does not say whether the email or the password was wrong — deliberate.

Password recovery

Figure 7 — Reset your password

A screenshot of a web form titled "Reset your password". The form is centered on a light pink background. It contains a text input field with the placeholder "you@yourboutique.com". Below the input field is a dark button labeled "Send reset link". At the bottom of the form is a link that says "Back to sign in".

Reset your password

Enter the email address you sign in with and we will send you a link to choose a new password.

you@yourboutique.com

Send reset link

[Back to sign in](#)

Forgot password

Forgot password? → enter the sign-in email → **Send reset link**. The reset link is emailed, so the boutique needs SMTP configured (`EMAIL_HOST` and friends); with no mail backend configured the request still reports success.

Signing out

Logout is the last item in the sidebar on every screen, and inside the Menu sheet on a phone.

☐ **Require approval for new designs**
When on, uploads from staff other than you wait for your review before appearing in the library.

Save Changes

Owner account

Read-only identity: your name, role, **tenant domain** (the schema name) and atelier email.

Editable: **Boutique Name** · **Boutique Address** · **Boutique Phone** · **Boutique Email** · **Boutique Logo**, plus one switch — **Require approval for new designs**. With it on, uploads by anyone other than the owner wait for review before they appear in the library.

Save Changes commits. These four fields print on invoices and on the public tracking page; if you leave them blank the customer sees blanks, not placeholder text.

6.3 Team management — Manage Tailors

Figure 10 — Manage Tailoring Staff

Manage tailors

Two rosters — *Master Tailors (Cutting & Supervision)* and *Stitching Tailors (Assembly & Detailing)* — and below them **Workflow Assignment & Supervision Control**, a table of every order in creation with its Master and Tailor.

Adding a staff member

Figure 11 — Add New Tailor Profile

The screenshot shows the 'Add New Tailor Profile' modal form. The form has the following fields and options:

- Tailor Name:** Text input field containing 'Lakshmi Iyer'.
- Email Address (for login):** Text input field containing 'lakshmi@demoboutique.test'.
- Specialty:** Text input field containing 'Bridal lehenga, aari work'.
- Rating (1.0 — 5.0):** Text input field containing '5'.
- Status:** Dropdown menu with 'Available' selected.
- Staff Role:** Dropdown menu with 'Master Tailor (generalist)' selected.

Below the Staff Role dropdown, there is a note: 'Can work on every stage.' At the bottom right of the modal are two buttons: 'Cancel' and 'Save Tailor'.

Add tailor

Field	Notes
Tailor Name	Shown on orders and to the customer's staff-facing records
Email Address (for login)	Creates the login. Leave blank for a no-login profile.
Specialty	Free text, e.g. <i>Bridal lehenga, aari work</i>
Rating (1.0 — 5.0)	Feeds the Atelier Average Rating on Analytics
Status	Available / Busy
Staff Role	Stitching Tailor, Master Tailor (generalist), or one of Measurement / Pattern / Cutting / Maggam / Finishing / Pressing / QC Master

Save Tailor.

The credentials modal — shown once

Figure 12 — Share Login Credentials

Tailor credentials

The password is generated by the server and displayed **exactly once**. It is never recoverable afterwards. The modal offers **Copy** and **Share WhatsApp**. Copy it before closing.

The specialist roles (QC Master, Cutting Master, and so on) are created correctly and receive their stages, but the two rosters on this screen only render Masters and Stitching Tailors — a specialist you add will not appear in either list. See §31.

2. **Body Measurements & Sizing** — bust, waist, hips, shoulder, arm, neck, length, occasion preference.
3. **Sizing Version History** — every revision, dated. Measurements are never overwritten silently.
4. **Order History** — order id, date, assigned tailor, stage progress (e.g. 15/15 stages), value, status.
5. **Style Profile** — derived from the customer's own orders: budget band, colour split, style split, size consistency, visit pattern, risk status and a suggested next action.
6. **Go with Existing Design / Create New Design** — start the next order for this customer.

6.5 Fabric library — Manage Fabrics

Figure 14a — Manage Fabric Library

Fabrics

The boutique's own fabric catalogue, separate from Inventory: Inventory tracks *quantities* of material, this screen holds the *fabrics you offer a client* in the order wizard. Each card shows name, material, colour, price per metre, availability, with **Edit** and **Delete**.

Figure 14b — Add New Fabric

The screenshot shows the 'Add New Fabric to Catalog' modal form. The form is titled 'Add New Fabric to Catalog' with a close button (X) in the top right corner. It contains the following fields and options:

- Fabric Name:** A text input field containing 'Kanchipuram Silk'.
- Material:** A text input field containing 'Pure mulberry silk'.
- Color:** A text input field containing 'Temple Red'.
- Price per Meter (₹):** A text input field containing '4200'.
- Image URL (Optional):** A text input field with a placeholder 'e.g. https://images.unsplash.com/photo-...'. There is a small icon to the right of the field.
- Available in Inventory:** A checkbox that is checked, with the label 'Available in Inventory'.
- Buttons:** 'Cancel' and 'Save Fabric' buttons at the bottom right.

The background shows the 'Manage Fabric Library' interface with a sidebar menu on the left containing options like 'Index Alerts', 'Dashboard', 'Manage Orders', 'Customers', 'Invoices', 'Analytics', 'Manage Fabrics' (highlighted), 'Inventory', 'Manage Tailors', 'Manage Designs', 'Design Work', 'My Account', and 'Logout'. The top right of the background shows a user profile 'Hi, Karya' and a '+ Add New Fabric' button.

Add fabric

Fabric Name · Material · Color · Price per Meter (₹) · Image URL (optional) · **Available in Inventory** → **Save Fabric**.

7. Design management

Figure 15 — Manage Designs, dashboard tab

Manage designs

Counters: Total Designs · Designers · Collections · Pending Approval. Panels: Recent Uploads, Most Viewed, Most Ordered, Trending This Week, and the **Designers** roster.

Boutique Designs switches to the library itself, grouped by garment: Saree, Blouse, Lehenga, Lehenga Blouse, Dupatta, Kurti, Anarkali, Petticoat, Salwar, Churidar, Palazzo, Sharara, Gown, Suit (Kameez), Sherwani, Uncategorized.

Adding a designer, and giving them a login

Figure 16 — Add designer

The screenshot shows the 'Manage Design Collections' dashboard for 'SCALEEZY THE ATELIER EXPERIENCE'. The user is logged in as 'Hi, Kavya'. The dashboard has a sidebar with navigation links: Inbox Alerts, Dashboard, Manage Orders, Customers, Invoices, Analytics, Manage Fabrics, Inventory, Manage Tailors, Manage Designs (highlighted), Design Work, My Account, and Logout. A 'Need Help?' chat button is also present. The main content area is titled 'Manage Design Collections' with a subtitle 'Add, edit, or remove catalog designs and AI suggestions.' and a '+ Add New Design' button. Below the title are two tabs: 'Dashboard' (selected) and 'Boutique Designs'. The 'Dashboard' tab displays four summary cards: '0 Total Designs', '0 Designers', '0 Collections', and '0 Pending Approval'. Below these are four sections: 'Recent Uploads' (Nothing uploaded yet.), 'Most Viewed' (No views recorded yet.), 'Most Ordered' (No orders placed from the library yet.), and 'Trending This Week' (Nothing trending in the last 7 days.). At the bottom is the 'Designers' section, which contains a form with a text input field containing 'Meera Nair', an 'Email (optional)' input field, and an 'Add designer' button. Below the form, it says 'No designers yet. Add one above to credit them on a design.'

Add designer

Name (required) and email (optional) → **Add designer**. Then, on the designer's row, enter their address and press **Grant login**.

Figure 17 — Designer login issued

The screenshot displays the 'Manage Design Collections' dashboard for a user named Kavya. The dashboard includes a sidebar with navigation options like 'Inbox Alerts', 'Dashboard', 'Manage Orders', 'Customers', 'Invoices', 'Analytics', 'Manage Fabrics', 'Inventory', 'Manage Tailors', 'Manage Designs', 'Design Work', 'My Account', and 'Logout'. The main content area shows a 'Dashboard' tab with four summary cards: 'Total Designs' (0), 'Designers' (0), 'Collections' (0), and 'Pending Approval' (0). Below these are sections for 'Recent Uploads', 'Most Viewed', 'Most Ordered', and 'Trending This Week', all showing 'Nothing' recorded. The 'Designers' section at the bottom features a form to add a new designer and a list of existing designers. A new designer, 'Meera Nair', is shown with '0 designs' and a 'Has a login' status. A yellow notification banner at the bottom states: 'Login created for Meera Nair. Share these credentials with them directly -- this is the only time the password is shown here. Email: meera@demoboutique.test Password: noBJXx8GKXuT Shown once. Copy it now — closing this panel is the last time it can be read. Close'.

Designer login

Again the password is shown once: *Shown once. Copy it now — closing this panel is the last time it can be read.* If the person already had an account, no new password is issued and the panel says so.

Add design

Field	Notes
Design Name	Required
Garment Category	Lehenga, Gown, Saree, Kurti, Sherwani, Anarkali — only these six
Design Type	Boutique Catalog Collection / AI Suggestion Template
Neckline Style, Sleeve Style	Optional; feed the match scoring in the order wizard
Catalog Price (₹)	Catalogue collection only
Image URL	Optional

Two behaviours to know before you demo this screen: the category list here is six entries, while the library groups by fifteen garments (there is no *Blouse* option), and designs added here land under **Uncategorised** in the library. Designs uploaded through the Design Studio (§8) categorise correctly. See §31.

8. Designer guide

A designer's account exists for one thing: their own design work. There is no customer, order or financial navigation, and the API refuses those endpoints outright.

8.1 Signing in

Same sign-in page. A designer lands on **My Work**.

8.2 My Work — the queue

Figure 19 — Designer work queue

Designer my work

Each item shows the garment, the order id, the due date, the state (*Assigned* → *Awaiting review* → *approved*), the owner's brief, and the garment's own spec — blouse type, sleeve length, padding, occasion, urgency, trial date, and the measurements. No customer name, no price: the API sends a designer a narrower payload than it sends the owner.

When nothing has been uploaded yet, the panel says: *Upload a design in the Design Studio first, then submit it here.*

8.3 Design Studio — the library

Figure 20 — Designer's library view

Designer library

The same library the owner sees, grouped by garment, with an **Upload design** button.

8.4 Uploading a design

SUPERVISING MASTER

Lakshmi Iyer

STITCHING TAILOR

Ravi Kumar

TOTAL VALUE

₹49,875

EST. DELIVERY

20 Sept 2026

Delivery Method: Direct Pickup

Orders

Search by order id or client; filter **All / Active / Shipped / Delivered**. Each order card carries:

- **Update Status** — Received, Confirmed, Stylist Review, Design & Creation, Quality Check, Ready for Dispatch, Shipped, Delivered.
- The **15 production stages**, clickable.
- **Finished garment photos** — nine view slots (front, back, left, right, close-up, fabric texture, sleeve detail, blouse detail, dupatta styling).

- **Customer updates** — the queued WhatsApp messages.
- Supervising Master, Stitching Tailor, total value, estimated delivery, delivery method.

10. Multi-garment orders

One order carries as many garments as the customer is having made, and the product keeps them separate all the way through.

Pick them in step 1 under **Dresses in this Order**. From then on:

Level	What is per-garment	What is per-order
Garment card	type, occasion, trial, delivery date, urgency, priority	—
Measurements	its own set, drawn from that garment's template	—
Design	its own shortlist and its own AI suggestions	—
Materials	its own inventory picks and quantities	—
Price	its own base / fabric / embroidery / customisation / tailoring	packaging, discount, GST, total
Design work	assigned per garment (<i>order · garment</i>)	—
Production stages	—	one set of 15 stages for the order
Status, payment, invoice, tracking	—	one per order

Worked example — the demo order:

Order T2B-260827-2925
Customer: Ananya Krishnan
Garments:
1. Blouse Princess · Elbow sleeve · Padded · ₹15,000
Blouse length 15", Shoulder 14", Upper chest 36", Waist 30", Armhole 16"
Main fabric: Kanchipuram Silk – Temple Red · 1.2 m from stock
2. Lehenga A-Line · Dori waist finish · ₹32,000
Waist 30", Floor length 41"
Main fabric: Kanchipuram Silk – Temple Red · 4.5 m from stock
Packaging ₹500 · Subtotal ₹47,500 · GST 5% ₹2,375 · Total ₹49,875

Note what is **not** per-garment: production stages are order-level. A single "Stitching In Progress" covers every garment on the order.

11. Measurements

Where they are captured

Inside the order wizard, on each garment's card — because which measurements are needed depends on the garment. A Blouse asks for six; a Lehenga asks for two, both required.

Where they are stored

Against the **customer**, not only the order. The customer profile shows the current set plus **Sizing Version History** — every earlier set, dated. Taking new measurements adds a version; it does not overwrite.

How they reach the floor

Production staff see them on their own dashboard, per garment, under  **MEASUREMENTS AS ORDERED** — and again inside every stage-update modal, so a tailor never has to leave the stage they are working on to check a number.

Figure 45 — Measurements as the Master sees them

Master assignments

Reusing them

Choosing **Select Existing Customer** in step 0 carries the saved measurements into the new order; the card is pre-filled and can be adjusted for this garment.

12. Inventory management

Seven panels: **Items** · **Catalogue** · **Locations** · **Recipes** · **Purchase Orders** · **Suppliers** · **Reports**. Four headline figures sit above all of them — Stock Value, Out of Stock, Reorder Due, Dead Stock (no movement in 90 days).

Items

Figure 46 — Inventory items

Inventory items

Filter by category — Fabric, Border & Trim, Lining, Embellishment, Stitching Material, Packaging, Maggam / Embroidery, Other — or by **Reorder due only**. Each row shows in stock, reserved, available, location, and the actions **Move**, **History** and **Edit**.

Adding an item

Figure 47 — New inventory item

The screenshot shows the 'New inventory item' form within the SCALEEZY 'Inventory' section. The form is a modal dialog with a close button (X) in the top right corner. It contains the following fields and values:

- Item code ***: FAB-KS-001
- Name ***: Kanchipuram Silk — Temple Red
- Category**: Fabric (dropdown menu)
- Unit**: Meter (dropdown menu)
- Colour**: Temple Red
- Rack location**: A1
- Purchase price**: 4200
- Selling price**: 5600
- Reorder level**: 5
- Minimum stock**: 3 (with a small up/down arrow icon)
- Supplier**: — (dropdown menu)

Below the form fields, there is a note: "Stock quantities are not set here — they only change through recorded movements." At the bottom right of the form are two buttons: "Cancel" and "Save Item".

The background shows the 'Inventory' dashboard with a sidebar menu on the left containing: Inbox Alerts, Dashboard, Manage Orders, Customers, Invoices, Analytics, Manage Fabrics, **Inventory** (selected), Manage Tailors, Manage Designs, Design Work, My Account, and Logout. The main content area displays 'Inventory' with a subtitle 'Fabrics, trims and materials. Every change is recorded in the stock ledger.' and a '+ New Item' button in the top right. It also shows 'STOCK VALUE ₹0' and '0 items tracked'.

Add inventory

Item code · Name · Category · Unit (defaults per category) · Colour · Rack location · Purchase price · Selling price · Reorder level · Minimum stock · Supplier.

Stock quantities are not set here. The form says so: *Stock quantities are not set here — they only change through recorded movements.* This is deliberate; the ledger is the only source of truth for a number.

Recording a movement

Figure 48 — Stock movement

Stock movement

Movement	Meaning
Stock In	Goods received into the boutique
Reserve	Spoken for by an order, still on the shelf
Release	Cancel a reservation
Issue to production	Handed to the workroom; leaves the shelf
Consume	Actually used up on a garment
Waste	Offcuts and loss during production
Return	Unused material back from the workroom
Adjust	Set to a counted total after a stock take

Order-linked movements can name the order (needed for cost-per-order and consumption reports) and stock-outs can name the location they leave from.

How inventory connects to an order

This is automatic, and it is one of the strongest things to demonstrate:

```

Item created                stock 0
  ↓ Stock In movement
Stock available             40.000 m
  ↓ Garment card: "Main Fabric" picked from stock, quantity 1.2 + 4.5
Order created               choice stored on the garment
  ↓ Production reaches "Fabric Confirmed"
RESERVATION written         available falls, in-stock unchanged
  ↓ Production reaches the stitching stages
CONSUMPTION written         in-stock falls  40.000 → 34.300
  ↓ Order delivered
Reservations released and reconciled

```

Verified on the demo order: Kanchipuram Silk went from 40.000 m to 34.300 m — exactly the 1.2 m and 4.5 m chosen on the two garment cards, with **RESERVATION** and **CONSUMPTION** rows in the ledger against order 1.

Reorder alerts

When a movement takes an item to or below its reorder level, a notification is raised: *Reorder level reached: Aari Beads — Ruby (EMB-BD-003) is down to 18.000 Piece, at or below its reorder level of 20.000.* The **Reorder Due** tile counts them.

The other panels

Panel	What it is	Screenshot
Catalogue	A shipped reference catalogue of materials — base fabrics, embroidery and metallic threads, needles, frames, bead families, and more — to create items from rather than typing them	16-1 [owner/16-1-inventory-catalogue.png]
Locations	Where stock physically sits; per-item breakdown and transfers	16-2 [owner/16-2-inventory-locations.png]
Recipes	A bill of materials per garment. <i>An order reserves against the recipe.</i>	16-3 [owner/16-3-inventory-recipes.png]
Purchase Orders	Raise a PO against a supplier, receive against it	16-4 [owner/16-4-inventory-purchase-orders.png]
Suppliers	Supplier records	16-5 [owner/16-5-inventory-suppliers.png]
Reports	Date-ranged stock value, in stock, reserved, available, at reorder level, out of stock, plus waste and damage rates	16-6 [owner/16-6-inventory-reports.png]

- ☐ Garment Steam Pressing
- ☐ Dispatch or Fit Trial Ready

Master assignments

1. Order id, client, estimated delivery, order status.
2. Assigned Supervising Master and Stitching Tailor.
3. Garments on the order.
4. **Measurements as ordered**, per garment.
5. **Production stages — select a stage to update**.
6. Delivery method.
7. **Master Production Verification Checklist** — Dress & Pattern Cutting, Matching Thread & Accents, Hemming & Seam Finishes, Fall & Pico (sarees only), Hook or Buttons Closure, Garment Steam Pressing, Dispatch or Fit Trial Ready.

Updating a stage

Figure 50 — Stage update modal

Stage update

The modal shows the full garment spec and materials, the current status and the SLA target, then **Manage Stage Transition**:

Control	Purpose
Assign this stage to	Hand the stage to a named person
Record who performed this	Credit the work
Comments / Fitting Logs	Notes against the stage
Upload Progress Photo	Attach an image
Start In-Progress	NOT_STARTED → IN_PROGRESS
Pause Stage	back to paused
Complete Stage	→ COMPLETED
Skip Stage	for optional stages, e.g. Maggam Work on a garment with no embroidery

Figure 51 — A stage in progress

Stage started

What a Master can and cannot do

Can: run every stage their role owns, assign stages, read the whole floor and the customers behind it, upload and publish finished-garment photos, complete the verification checklist, view Manage Orders, Customers and Design Work.

Cannot: create or edit customers, touch inventory, record payments, change prices, or open boutique settings.

The other Master screens

Screen	Screenshot
Manage Orders	51 [master/51-master-manage-orders.png]
Customers	52 [master/52-master-customers.png]
Design Work	53 [master/53-master-design-work.png]
My Account	54 [master/54-master-my-account.png]

Specialist roles (QC Master and the rest) get the same **My Assignments** screen, narrowed to orders sitting on their own stage — 55 [master/55-qc-my-assignments.png].

14. Tailor guide

Signing in

A Stitching Tailor lands on **My Assignments Dashboard** — *Logged in as Ravi Kumar (Tailor)*. The sidebar has two items: **My Assignments** and **My Account**. That is the whole application for a tailor, by design.

Figure 52 — Tailor's assignments

The screenshot shows the 'My Assignments Dashboard' for a tailor named Ravi Kumar. The dashboard is divided into a sidebar and a main content area. The sidebar on the left includes the 'SCALEEZY' logo, 'Inbox Alerts' (1), 'My Assignments' (selected), 'My Account', and 'Logout'. The main content area displays the 'Active Assigned Orders' for Order ID T2B-260827-2925. It shows client details (Ananya Krishnan), assigned roles (Supervising Master: Lakshmi Iyer, Stitching Tailor: Ravi Kumar), and garment specifications (Blouse and Lehenga) with measurements. A production stages progress bar is visible, followed by a delivery method section and a form to submit stitching completion and photos. The form includes a text area for comments and a file upload button for the completed garment photo.

Tailor assignments

What the tailor receives from upstream

Everything needed to stitch, and nothing else:

- Order id, client name, estimated delivery.
- Who the supervising Master is.
- The garments on the order.
- **Measurements as ordered**, per garment.
- The garment spec — blouse type, sleeve length, padding, dori, neck details.
- The materials chosen, with quantities.
- Special instructions and customer notes. ****Internal notes are not shown to the customer**, but staff do see them.**

No prices, no payment status, no other order on the floor.

Doing the work

Figure 53 — Tailor updating the stitching stage

Tailor stage

Click **Stitching In Progress** → **Start In-Progress**. Log comments and progress photos as you go. When the garment is assembled, reopen and **Complete Stage**, then do the same for **Stitching Completed**.

Tailor done

The handoff is implicit and automatic: completing *Stitching Completed* leaves the next stage, *Hemming & Finishing*, owned by the Master.

A tailor cannot advance a stage that belongs to another role. The buttons are not offered.

15. Production workflow

The 15 stages, and who owns each

#	Stage	SLA	Who may advance it
1	Created	12 h	Owner, Master
2	Measurements Completed	24 h	Owner, Master, Measurement Master
3	Fabric Confirmed	24 h	Owner, Master
4	Pattern Cutting	24 h	Owner, Master, Pattern Master, Cutting Master
5	Maggam Work <i>(optional)</i>	96 h	Owner, Master, Maggam Master
6	Assigned to Tailor	12 h	Owner, Master
7	Stitching In Progress	72 h	Owner, Tailor
8	Stitching Completed	12 h	Owner, Tailor
9	Hemming & Finishing	24 h	Owner, Master, Finishing Master
10	Pressing	12 h	Owner, Master, Pressing Staff
11	Master Quality Check	12 h	Owner, Master, QC Master
12	Trial Scheduled	48 h	Owner, Master
13	Trial Completed	24 h	Owner, Master
14	Ready for Delivery	24 h	Owner, Master
15	Delivered	12 h	Owner, Master

Stage 5 is optional — use **Skip Stage** on a garment with no embroidery; a skipped stage does not block delivery.

Who does what

Order status vs production stage

Two different things, both on the order card:

- **Order status** (8 values) is the commercial state shown to the customer: Received → Confirmed → Stylist Review → Design & Creation → Quality Check → Ready for Dispatch → Shipped → Delivered.
- **Production stage** (15 values) is the shop-floor state.

Advancing stages moves the order status along on its own — completing the production ladder took the demo order to *Ready for Dispatch* without anyone touching the status dropdown.

16. Payment management

Payments are recorded at two points.

At order creation

Full payment, partial payment, or a custom advance amount — see §9. The advance is marked **non-refundable** on the screen.

Afterwards, on the Invoices screen

Figure 55 — Invoices & Billing

Invoices

Three figures across the top: **Total Collected Revenue**, **Outstanding Balance**, **Total Invoiced Volume**.

The table carries one row per order — Invoice ID, Billing Client, Date, Total Price, Advance Paid, **Total Paid** (editable), Balance Due, **Payment Status** (Pending / Partially Paid / Paid) and **View Invoice**.

To record the balance: type the new total received into **Total Paid**, press Enter, then set **Payment Status** to *Paid*.

Figure 56 — Settled

Invoice paid

Collected revenue ₹49,875, outstanding ₹0.

There is no card gateway. The payment screens at checkout show card-network logos but nothing is charged — payment is **recorded**, taken by whatever means the boutique already uses. See §31.

17. Invoices

Figure 57 — Invoice

Invoice

Reached from **Invoices** → **View Invoice**, or from **View & Print Invoice** on the order-confirmation screen.

Contains: boutique identity (name, address, phone, email from My Account), invoice/order id and date, the customer's details, the garments with their prices, packaging, discount, subtotal, GST at 5%, total, amount paid and balance due. **Print Invoice** opens the browser print dialog — use *Save as PDF* there to produce a file.

The invoice number **is** the order id; there is no separate invoice sequence.

Each garment line also carries a fabric note — *Includes boutique fabric* — ₹x, or *Customer supplied fabric*. That note is decided by whether a fabric price was typed into the step-6 breakdown, **not** by the garment's recorded material source, so a garment cut from boutique stock with no fabric price entered prints as customer-supplied. Fill in the Fabric field on the cost breakdown to avoid it — see §31.10.

18. Customer communication

What the product actually does — and does not do — matters here.

It composes messages. It does not send them.

Figure 58 — Queued customer updates

Customer updates

On each order card, **Customer updates** lists messages waiting to go, each with its type and the destination number, e.g. *order confirmation · 919845012345*:

Dear Ananya, we have received your order T2B-260827-2925! We will update you as it progresses.

Garments: Blouse and Lehenga

Expected delivery: 20 Sep 2026

Track your order: <http://localhost:8000/track/eyJzIjoia2F2eWFkZW1v.../>

Two buttons: **Open WhatsApp** — opens WhatsApp with the message pre-filled to that number, where a human presses send — and **Mark sent**, which clears it from the queue.

Messages are queued automatically as the order progresses: order confirmation, status changes, and readiness.

Finished-garment photos

Figure 59 — Photos uploaded

Finished photos

Nine view slots. Upload against a view, then press **Share with customer** — until you do, the panel reads *not yet shared* and the customer sees nothing. The button warns when the minimum (front and back) is not met.

Only the Owner and the Master may upload or publish photos.

Boutique CRM — User Guide

93

Customer tracking (continued)

The URL is `/track/<signed-token>/`. The token is signed and carries the boutique's schema and the order id, so a link works only for the order it was issued for and cannot be edited into someone else's order.

The page is rendered by Django — no app, no login, no JavaScript framework — and shows:

Block	Contents
Header	Boutique name, order id
Your order	Customer, garments, order date, expected delivery, status
Progress	All 15 stages; completed ones ticked and timestamped to the minute
Your outfit is ready	The published finished-garment photos (only once shared)
Payment	Total, paid, status, balance due
Collection	Method, and the pickup address or courier details
Footer	The boutique's phone number

What the customer never sees: internal notes, staff names, other orders, prices of individual components, or anything belonging to another boutique.

What a customer can do

Read the page, and telephone the number at the bottom. There is no reply box, no approval button, no login, no document upload. Everything else runs through WhatsApp with a human at each end.

20. Try-On

Figure 62 — Scaleezy Live Visualizer

Try-on modal

Where it is: order wizard, **step 4 Fabric Selection**, after a fabric is chosen — a banner reading *Scaleezy Live Visualizer Available* with a **Try On / Drape Fabric** button.

What it does: opens a modal with three panels — Selected Style Sketch, Selected Fabric Swatch, and ✨ *3D Mannequin Draped View*. **Start Try On** shows a two-second *Simulating Try On...* animation, then fills the third panel.

Figure 63 — After Start Try On

Try-on result

Be straight about this in a demo. It is a mock:

- The "draped view" is a **stock photograph picked by fabric colour keyword** (rose/pink → one Unsplash image, gold/yellow → another, and so on). Nothing is rendered, and the customer's garment, measurements and design are not used.
- The two-second wait is a `setTimeout`, not a computation.
- The images are hot-linked to Unsplash, so with no internet the panel shows a **broken image** — which is what the screenshot above records.
- There is no server-side try-on of any kind.
- **It is staff-side only.** The customer's tracking page has no try-on.

The product's own module registry says so plainly: `try_on: 'Not implemented anywhere in this product.'`

The modal's own disclaimer — *Reference Simulation Only — actual handcrafting details may vary* — is the honest framing to repeat.

Notifications

Notifications (continued)

Inbox Alerts sits at the top of the sidebar with an unread badge. Each entry carries a title, a time and a line of detail. Live alert types:

Alert	Example
New order	<i>New Order Received: T2B-260827-2925 — A new custom order has been received for client Ananya Krishnan.</i>
Order status change	<i>Order T2B-260827-2925 Update: Confirmed — status updated to Confirmed.</i>
Inventory reorder	<i>Reorder level reached: Aari Beads — Ruby (EMB-BD-003) is down to 18.000 Piece, at or below its reorder level of 20.000.</i>

The feed is per-user: staff see notifications addressed to them, the owner sees the owner's feed. No one can post into another person's feed.

There is no email or push delivery of these — they are in-app only.

22. Search, filters and sorting

Screen	Search	Filters	Notes
Manage Orders	Order ID or client	All / Active / Shipped / Delivered	
Customers	Name or mobile	All / Women / Men / Kids	
Invoices	Invoice ID or client	All / Paid / Pending	
Manage Designs (library)	—	Garment category tiles (15 + Uncategorized), designer, collection	
Inventory → Items	Item name	Category (8), Reorder due only	
Inventory → Catalogue	Full-text over the shipped catalogue	<i>Only what can be stocked</i>	
Inventory → Reports	—	From / To date range	
Design Work	—	Only work still open	Both owner and designer
Order wizard → existing customer	Name or mobile number	—	
Order wizard → fabrics	—	Boutique / Customer fabrics, then material	

There are no user-controlled sort controls and no pagination controls anywhere in the boutique workspace; lists render in the server's order.

23. Reports and analytics

Figure 65 — Business Analytics & Trends

Analytics

Metric	What it means
Collected Revenue	Money actually recorded as paid
Pending Invoices	Outstanding balance across all orders
Average Ticket Size	Total invoiced ÷ number of orders
Client Base	Customer profiles in the directory
Popular Garment Types	Count and share, by garment across all orders
Customer Segmentation	VIP / HVC (High Value Customer) / General, by spend
Neckline & Sleeve Trends	Top necklines and sleeves ordered
Staff & Workload	Total tailors, busy, free, average rating
Order Status Breakdown	Orders by status

Everything on this screen is computed in the browser from orders already fetched. The one server-side reporting surface in the product is **Inventory** → **Reports** (§12), which does date ranges, stock valuation, and waste/damage rates.

There is no export button on Analytics.

24. Settings and profile

Everything is on **My Account** — see §6.2.

Setting	Who	Effect
Boutique Name / Address / Phone / Email	Owner	Printed on invoices and the customer tracking page
Boutique Logo	Owner	Branding
Require approval for new designs	Owner	Staff uploads wait for owner review

Staff see the same screen with their own name, role and boutique, without the editable boutique block.

There is **no password-change screen inside the workspace**. A staff member who wants a new password uses *Forgot password?* on the sign-in page, which needs working email; otherwise the owner reissues the account.

25. Mobile experience

The workspace is genuinely responsive — it is not a separate app and not a scaled-down desktop page. Captured at 390×844.

Figure 66 — Sign in on a phone

The image shows a mobile login screen for the brand SCALEEEZY. At the top, there is a light beige header with a rounded button containing a left arrow and the text "Back to Home". Below this, the brand name "SCALEEEZY" is displayed in a large, bold, black serif font, with the tagline "YOUR VISION. OUR CRAFT." in a smaller, grey, sans-serif font underneath. The main content area is a white rounded rectangle. It starts with the text "Welcome back" in a bold serif font, followed by a yellow hand emoji. Below this is the instruction "Login to continue your custom creation journey." in a grey sans-serif font. Further down, the word "Email" is shown in a bold sans-serif font. At the bottom of the white area is a white input field with a grey envelope icon on the left and the placeholder text "Enter your email" in a grey sans-serif font.

Mobile dashboard (continued)

Mobile dashboard (continued)

What changes on a phone:

1. The sidebar becomes a **bottom navigation bar** — for an owner: Dashboard, Orders, Customers, Inventory, Menu.
2. Everything else moves into the **Menu** sheet.
3. Tables become stacked cards.
4. The quick-action tiles become a two-column grid.
5. Order progress renders as a vertical timeline with COMPLETED chips and dates.

Mobile menu (continued)

Mobile menu (continued)

The bottom bar is role-aware: a Master gets Assignments, Orders, Customers, Menu; a Tailor or designer gets Assignments, Account, Menu.

Screen	Mobile screenshot
Orders	m04 [mobile/m04-owner-orders.png]
Customers	m05 [mobile/m05-owner-customers.png]
Inventory	m06 [mobile/m06-owner-inventory.png]
Invoices	m07 [mobile/m07-owner-invoices.png]
Tailor assignments	m08 [mobile/m08-tailor-assignments.png]
Designer work	m09 [mobile/m09-designer-work.png]
Customer tracking	m10 [mobile/m10-customer-tracking.png]

The customer tracking page is the one most often opened on a phone, and it is built for it.

The order wizard works on a phone but is long; taking a first order at the counter is more comfortable on a tablet or laptop.

26. Super Admin console

A separate application at `/superadmin.html`, with its own bundle, its own sign-in and its own API under `/api/superadmin/`. It is **not** reachable from a boutique account.

Figure 69 — Platform console sign-in

The image shows a sign-in form for the 'Platform console'. The form is centered on a light gray background. It has a title 'Platform console' and a subtitle 'Scaleezy administrators only.'. Below these are two input fields: 'Administrator username' and 'Password'. At the bottom of the form is a black button with the text 'Sign in' in white.

Superadmin login

Platform console — Scaleezy administrators only. Administrator username and password.

Access requires two things at once: the account must be a superuser **and** the connection must be on the public registry schema. A superuser created inside a boutique's own schema cannot get in.

The screens below are documented from the shipped code, not from screenshots: capturing them needs platform-administrator credentials, which are not part of the boutique demo data. See the coverage matrix.

Group	Screen	What it does
Overview	Dashboard	Cross-boutique summary
	System Health	Platform health checks
Organizations	Boutiques	Every tenant; open one for detail; suspend / reactivate ; toggle its modules
	Users	Cross-tenant user search and per-user actions
	Onboarding	How far each new boutique has got through setup
	Leads	Demo requests from the public site
Product	Modules	Which feature modules a boutique has switched on
	Configuration	Platform settings, including maintenance mode
Operations	Orders Monitor	Orders across all boutiques
	Integrations	Third-party connections
	Customer Messaging	Message activity
Reliability	Error Center	Unhandled exceptions, grouped by fingerprint, with a badge count
	Jobs & Queues	<i>Listed but marked absent — no data behind it</i>
	API Monitoring	<i>Listed but marked absent — no data behind it</i>
Security	Audit Log	Append-only record of console actions: actor, action, target, before/after, reason, IP
	Sessions & Tokens	Session and token management
Support	Diagnostics	Per-boutique support view

Module gating

Modules that can be switched off per boutique: Design Studio, Purchasing Catalogue, Inventory, Garment Templates, Appointments, Production API, Activity Feed, Fabrics, Team, Notifications, Public Order Tracking.

Always on and not switchable: authentication, boutique settings, the dashboard, the public tracking page, the console itself — a console that can lock itself out is not a console.

Deliberately absent from the module list, with the reason recorded in the code: **Invoices** and **Reports** (computed in the browser, so a switch would hide a menu item while `curl` walked straight past it) and **Try-On** (not implemented at all). **Feature Flags** is likewise hidden: the model and API work but nothing reads them, and a switch that controls nothing is worse than no switch.

27. Appointments

Figure 70 — Book an Appointment

The screenshot shows the 'Book an Appointment' modal in the SCALEEZY dashboard. The modal is centered and has a white background with a close button (X) in the top right corner. It contains the following fields:

- Client ***: A dropdown menu with the text 'Select a client'.
- Type**: A dropdown menu with the text 'Garment Trial'.
- Date & time ***: A date and time picker showing 'dd/mm/yyyy, --:--'.
- With**: A dropdown menu with the text 'Unassigned'.
- Notes**: A text area for additional information.

At the bottom of the modal are two buttons: 'Cancel' and 'Book appointment'.

The background of the dashboard is visible, showing a sidebar with navigation links like 'Dashboard', 'Manage Orders', 'Customers', 'Invoices', 'Analytics', 'Manage Fabrics', 'Inventory', 'Manage Tailors', 'Manage Designs', 'Design Work', 'My Account', and 'Logout'. The main content area includes a 'Welcome back, Kavya!' message, a 'New Order' button, and an 'Order Progress' section for 'Ananya Krishnan'.

28. Troubleshooting

Messages below are the product's own wording.

Symptom	Message	What to do
Sign-in rejected	<i>Invalid login credentials. Please try again.</i>	Check the address is the one the login was issued to. Staff logins use the email typed into the tailor or designer record, lower-cased.
Signed out mid-work	<i>Your session has ended. Please sign in again.</i>	Sign in again; unsaved wizard progress is kept as a draft.
An action is refused	<i>You do not have permission to do that. / Your role does not permit this.</i>	The role does not own that action — see §3.
Something vanished	<i>That no longer exists. It may have been removed.</i>	Another user deleted it; refresh the list.
Upload rejected	<i>That file is too large to upload.</i>	Photos are capped at 5 MB.
Server error	<i>The server could not complete that (error 500). Please try again.</i>	Retry; if it persists it lands in the Super Admin Error Center.
Two tabs on one draft	<i>This order was changed somewhere else.</i>	The draft was edited elsewhere. Reload before continuing.
Next does nothing in the order wizard	<i>(none — the button simply does not advance)</i>	A required field is unfilled. Most often Trial Date after setting Trial Required = Yes, or a garment's Type field.
Signup seems stuck	<i>Creating your boutique...</i>	Normal — schema creation takes 20–45 s. Do not reload.
Staff member cannot sign in	—	The one-time password was not copied. Reissue by editing the record, or use <i>Forgot password?</i> .
Password reset never arrives	—	Email is not configured (<code>EMAIL_HOST</code>). The request still reports success.
Try-On shows a broken image	—	Expected offline; the mock hot-links stock photos. See §20.
Empty screen with no error	e.g. <i>No items match these filters.</i>	A filter is still applied — clear it.

29. FAQ

Owner

Can I take one order for a blouse and a lehenga together? Yes. Pick both in step 1; each gets its own measurements, design, materials and price.

Where do I set my GST rate? You cannot — it is fixed at 5%.

A staff member lost their password. It was shown once and is not recoverable. Use *Forgot password?* if email is configured, or reissue the account.

Do customers get an automatic WhatsApp message? No. The product writes the message and hands it to WhatsApp; a person presses send.

Can I delete a customer? Not from the workspace.

Why is my stock unchanged after taking an order? Material is reserved when *Fabric Confirmed* is completed and consumed at the stitching stages — not at order creation.

Master

Why can I not advance the stitching stage? Stitching belongs to the Tailor role. You own stages 1–6 and 9–15.

Can I edit a price? No. Money is the owner's.

Can I see every order? Yes — Masters see the whole floor.

Tailor

Where are the measurements? On your assignment card under *Measurements as ordered*, and again inside every stage modal.

How do I hand work back? Complete *Stitching Completed*. The next stage is already the Master's.

Why can I only see some orders? You see the orders you are assigned to.

Designer

Why can I not see the customer's name? By design — a designer account gets the garment spec and the brief, not the client or the money.

How do I submit work? Upload in Design Studio, then pick it on My Work and press *Submit design*.

The owner asked for changes. The item returns to your queue with their note.

Customer

Do I need an account? No. Your boutique sends you a link.

Is my link private? It is signed and works only for your order.

When do photos appear? Only after the boutique publishes them.

Can I reply on the page? No — call the number at the bottom, or reply on WhatsApp.

30. Glossary

Term	Meaning in this product
Boutique	One business; one isolated database schema
Tenant domain	The schema name, shown on My Account
Order	One job for one customer, carrying one or more garments
Order ID	T2B-YYMMDD-nnnn ; also the invoice number
Garment	One item being stitched, with its own template
Garment template	The field set for a garment type — what a Blouse asks that a Lehenga does not
Design	A catalogue or uploaded reference in the design library
Design work	A garment handed to a designer, with a brief and a due date
Board	The per-garment shortlist of designs in the order wizard
Measurement version	A dated snapshot of a customer's measurements
Master	Supervising tailor; cutting and quality
Tailor	Stitching tailor
Specialist	Measurement / Pattern / Cutting / Maggam / Finishing / Pressing / QC Master
Production stage	One of the 15 shop-floor steps
Order status	One of the 8 commercial states
SLA	The target hours for a stage
Maggam work	Aari / zardosi embroidery, done on cut fabric before stitching
Fall & pico	Saree edge finishing
Stock movement	A ledger row: stock-in, reserve, release, issue, consume, waste, return, adjust
Recipe	A garment's bill of materials
Reorder level	The quantity that triggers a reorder alert
Dead stock	No movement in 90 days
HVC / VIP	Customer value segments
Style DNA / Style Profile	Derived preferences on the customer profile
Tracking link	The signed /track/<token>/ URL
Module	A feature area the platform can switch off per boutique

31. Known gaps / not yet implemented

Everything here was observed in the running build on 27 Aug 2026, not inferred from a specification. Each entry names how it was checked.

31.1 Try-On is a mock

Expected	Drape the chosen fabric on the chosen design and show the customer
Actual	A modal picks a stock Unsplash photograph by fabric colour keyword after a two-second fake delay. The customer's design, measurements and fabric are not used. With no internet the panel shows a broken image.
Impact	Cannot be demonstrated as a real capability. Customers never see it — it is staff-side only.
Verified by	Running it (Figures 62–63) and reading <code>getDrapedPreviewImage</code> ; the module registry records <code>try_on: 'Not implemented anywhere in this product.'</code>
Next	Either integrate a real garment-visualisation service, or relabel the button as a fabric/style reference board

31.2 No payment gateway

Expected	The card logos on the checkout imply a card can be charged
Actual	Nothing is charged anywhere. Payment is <i>recorded</i> — the boutique collects by its own means.
Impact	Do not promise online collection in a demo
Verified by	Completing checkout and settling the balance; no gateway exists in the codebase
Next	Integrate a payment provider, or remove the card-network logos

31.3 Designs added through *Add New Design* land in Uncategorized

Expected	A design saved as a Lehenga appears under Lehenga in the library
Actual	The library groups by garment template , and <i>Add New Design</i> sets only a garment-type string. All three catalogue designs saved that way show under Uncategorised ; the design uploaded through the Design Studio (which sets the template) categorised correctly.
Impact	The library looks empty per garment while holding designs
Verified by	Three designs saved with types Lehenga / Lehenga / Saree; library reads <i>Uncategorised 3</i>
Next	Make <i>Add New Design</i> set the garment template, or group the library by garment type as a fallback

31.4 Add New Design offers six garment categories, the product has fifteen

Expected	The same garment list everywhere
Actual	The modal offers Lehenga, Gown, Saree, Kurti, Sherwani, Anarkali. There is no Blouse — the single most-ordered garment in this market — nor Lehenga Blouse, Dupatta, Petticoat, Salwar, Churidar, Palazzo, Sharara, Suit (Kameez).
Impact	Catalogue designs for most garments cannot be typed correctly
Verified by	Reading the modal's options; the order wizard and Design Studio both offer fifteen
Next	Drive this select from the garment-template list

31.5 Specialist staff do not appear on Manage Tailors

Expected	A QC Master added to the team appears on the team screen
Actual	The screen renders two rosters only — Master Tailors and Stitching Tailors. A QC Master (or Cutting, Pattern, Maggam, Finishing, Pressing, Measurement Master) is created, gets a login, receives their stages and can sign in — but appears in neither list.
Impact	The owner cannot see, edit or reshare credentials for a specialist
Verified by	Creating <i>Sunita Rao</i> — QC Master: absent from the screen, present in the appointment staff picker and able to sign in
Next	Render a third roster, or group by role

31.6 Production stages are per order, not per garment

Expected	On a two-garment order, the blouse can be stitched while the lehenga is still being cut
Actual	One set of 15 stages covers the whole order. Everything else — measurements, design, materials, price, design work — is per garment.
Impact	Staged progress on a multi-garment order is approximate
Verified by	The demo order carries two garments and one stage ladder
Next	Per-garment stage ladders, with the order rolling up

31.7 Duplicate element ids across garment cards

Expected	Each field on the page has its own id, so its label points at it
Actual	Fields are keyed <code>tf-<field></code> per garment template, so two garments on one order repeat them. 17 duplicated ids on a Blouse + Lehenga order — <code>tf-occasion</code> , <code>tf-waist</code> , <code>tf-delivery_date</code> , <code>tf-main_fabric</code> and more. Clicking the second garment's label, or reaching it with a screen reader, targets the first garment's field.
Impact	Accessibility defect on the most important screen in the product; also breaks automated testing by label
Verified by	Counting duplicate ids in the live DOM on the garment step
Next	Prefix ids with the garment key

31.8 Tax and pricing defaults are hard-coded in the browser

Actual	GST is fixed at 5% ; packaging defaults to ₹500 ; base prices per garment type are a constant in the frontend (Lehenga ₹32,000, Sherwani ₹35,000, Gown ₹25,000, Suit ₹22,000, Anarkali ₹18,000, Saree ₹15,000, Kurti ₹5,000, everything else ₹15,000)
Impact	A boutique on a different rate, or with its own price list, must retype every price on every order
Verified by	Reading <code>GARMENT_PRICES</code> and the quote calculation; confirmed on the demo order
Next	Move rates and price lists into boutique settings

31.9 Customer messaging is manual

Actual	Messages are composed and queued; Open WhatsApp hands them to WhatsApp for a human to send, and Mark sent clears the queue. No message leaves the system on its own.
Impact	Real, but not automation — say so plainly in a demo
Verified by	Sending the demo order's five queued updates
Next	WhatsApp Business API integration

31.10 The invoice can tell customers they supplied their own fabric when they did not

Expected	The invoice reflects where the fabric came from — the order records it per garment as <i>Customer Provided Fabric</i> , <i>Store Inventory Fabric</i> or <i>Mixed</i>
Actual	The invoice decides from the fabric price instead: a garment with no fabric price typed into the step-6 breakdown is printed as <i>Customer supplied fabric</i> , and the invoice header reads <i>Fabric: Customer Fabric</i> .
Impact	Customer-facing and billing-relevant. On the demo order both garments were made from the boutique's own Kanchipuram Silk — 5.7 m consumed from stock, recorded in the ledger — and the invoice still reads <i>Customer supplied fabric</i> on both lines, because the fabric component of the price was left at zero.
Verified by	Figure 57, against the order's own <i>Material Source: Store Inventory Fabric</i> and the stock ledger
Next	Read the garment's material source, not its price, and fall back to the price only for the amount

Working around it today: type the fabric cost into each garment's **Fabric** field in the step-6 cost breakdown. The line then reads *Includes boutique fabric — ₹x*.

31.11 Smaller gaps

Gap	Detail	Verified by
Pinterest / Google Images	Listed as design sources in the AI Design Studio, both read <i>not connected</i>	Wizard step 3
No password change in-app	Only <i>Forgot password?</i> , which needs SMTP; with no mail backend the request still reports success	Every account screen
No customer delete	Customers can be created and edited, not removed	Customers screen
No export	Analytics has no download; only Inventory → Reports is server-side	Analytics screen
No sorting or pagination controls	Lists render in server order	Every list screen
Production API module	Registered as a module, described as <i>Production tasks and QC records</i> . <i>No screen calls this yet.</i>	Module registry
Feature Flags console screen	Model, API and tests exist; nothing reads them, so the screen is deliberately hidden	Console navigation source
Jobs & Queues, API Monitoring	Listed in the console and marked <i>absent</i> — the screens explain what is missing rather than showing empty charts	Console navigation source
Invoices / Reports not gateable	Computed in the browser, so a module switch would hide a menu item without protecting anything — deliberately excluded from the module list	Module registry
Owner-by-absence role fallback	An account left with no staff profile resolves to Owner. Both routes to that state are closed at their call sites, and the code marks it a known weakness.	<code>core/roles.py</code>

32. Final product workflow

Appendix A — Screenshot index

Every image in `screenshots/`, including those not embedded above.

Empty states — what a brand-new boutique looks like

Useful when demonstrating onboarding, and when writing training material.

Screen	Empty	With data
Dashboard	empty [owner/10-owner-dashboard-empty.png]	with data [owner/10-owner-dashboard.png]
Manage Orders	empty [owner/11-owner-orders-empty.png]	with data [owner/11-owner-orders.png]
Customers	empty [owner/12-owner-customers-empty.png]	with data [owner/12-owner-customers.png]
Invoices	empty [owner/13-owner-invoices-empty.png]	with data [owner/13-owner-invoices.png]
Analytics	empty [owner/14-owner-analytics-empty.png]	with data [owner/14-owner-analytics.png]
Manage Fabrics	empty [owner/15-owner-fabrics-empty.png]	with data [owner/15-owner-fabrics.png]
Inventory	empty [owner/16-owner-inventory-empty.png]	with data [owner/16-owner-inventory.png]
Manage Tailors	empty [owner/17-owner-tailors-empty.png]	with data [owner/17-owner-tailors.png]
Manage Designs	empty [owner/18-owner-designs-empty.png]	with data [owner/18-owner-designs.png]
Design Work	empty [owner/19-owner-design-work-empty.png]	with data [owner/19-owner-design-work.png]
My Account	empty [owner/20-owner-account-empty.png]	with data [owner/20-owner-account.png]

The empty states are written, not blank: *No active custom orders. Click "New Custom Order" to begin!* · *Add your first customer* · *Create your first order* · *No Master Tailors registered yet.* · *No design work outstanding. Assign a garment above to get started.* · *No items match these filters.*

Others
