

SCALEEZY

Boutique CRM — Demo Guide

What to show, what to say, what to click

Documented from the running product

Branch **MSK-CL** · commit **ccfed28**

Captured 27 August 2026

Demo boutique: Kanchi Threads, Chennai

1. Demo setup

Start the servers

```
cd antigravity/scratch/django_screens && ./start.sh
```

Backend on `http://localhost:8000` , workspace on `http://localhost:5173` . `start.sh` points at the local Postgres (`USE_LOCAL_DB=True`) — it will not touch a hosted database.

For the public website (built separately):

```
cd antigravity/scratch/django_screens/frontend && npm run build && npm run preview
```

Served on `http://localhost:4173` .

Open these tabs before you start

Tab	URL
1 — public site	<code>http://localhost:4173/</code>
2 — workspace	<code>http://localhost:5173/app.html</code>
3 — customer tracking	the link from the demo order (below)
4 — phone view	tab 2, browser dev tools at 390x844

Two-minute pre-flight

1. Sign in as the owner. The dashboard shows one order and one appointment.
2. Open **Manage Orders** — order `T2B-260827-2925` , *Delivered*.
3. Open the tracking link in tab 3 — it should show 15 ticked stages and two photos.

If any of that is missing, the demo data has been reset — see §6.

2. Demo data

Boutique: Kanchi Threads · 12 Kutchery Road, Mylapore, Chennai 600004 **Schema:**

kavyademoboutiquetest_bc8ec80a

Logins

Local demo credentials on a local database. They are not used anywhere else and must never be reused on a hosted environment.

Role	Email	Password
Owner — Kavya Reddy	kavya@demoboutique.test	DemoBoutique#2026
Master Tailor — Lakshmi Iyer	lakshmi@demoboutique.test	5T8zXlyrNkbS
Stitching Tailor — Ravi Kumar	ravi@demoboutique.test	5lsQV4xxfXIZ
QC Master — Sunita Rao	sunita@demoboutique.test	DHBCanRHX42T
Designer — Meera Nair	meera@demoboutique.test	noBJXxBGKXuT

The Super Admin console needs platform-administrator credentials, which are not part of this boutique's data. Show it only if you have them.

What is already in the boutique

Thing	Detail
Customer	Ananya Krishnan · +91 98450 12345 · Chennai · segment HVC
Order	T2B-260827-2925 — Blouse + Lehenga · ₹49,875 · Paid · Delivered · all 15 stages complete
Staff	1 Master, 1 Stitching Tailor, 1 QC Master, 1 Designer
Fabrics	Kanchipuram Silk (Temple Red) ₹4,200/m · Chanderi Silk Cotton ₹1,250/m · Raw Silk Dupion ₹1,850/m
Inventory	3 items with stock; Kanchipuram Silk shows 34.3 m left of 40 m — the 5.7 m this order consumed
Designs	5 records in the library, one of them uploaded by the designer with a real image (the designer's design appears twice)
Design work	One blouse brief, submitted by the designer and approved by the owner
Appointment	Design Consultation, 2 Sept 11:00, Ananya with Lakshmi

The customer tracking link

Owner → **Manage Orders** → the order card → **Customer updates** — the link is inside the message text. It is a signed URL; copy it from there rather than typing one.

3. Recommended demo sequence

Work down the list. Each block is *what to show* → *what to say* → *what to click* → *expected result* → *the point*.

3.1 The public site — 1 min

Show: localhost:4173 **Say:** "This is what a boutique owner finds. The pitch is narrow on purpose — this is not generic CRM, it is built for businesses that stitch to measurement." **Click:** Home → Lifecycle → Book a demo. **Result:** The demo form; leads land in the platform console. **Point:** *A vertical product, not a horizontal one.*

3.2 Sign in and the dashboard — 1 min

Show: Owner sign-in. **Say:** "Each boutique gets its own isolated database schema. Two boutiques on this server cannot see each other's clients or prices." **Click:** Sign in → land on the dashboard. **Result:** Order card, live production progress, upcoming appointment. **Point:** *One screen answers the two questions an owner asks all day: where is each order, and who is coming in.*

3.3 The customer record — 2 min

Click: Customers → Ananya Krishnan. **Say:** "Measurements are versioned — you can see what this client measured last season, not just today. The style profile is derived from their own orders." **Result:** Measurements, sizing version history, order history, style profile. **Point:** *The notebook, made searchable and shared with the whole floor.*

3.4 Taking an order — 5 min, the centrepiece

Click: New Custom Order → Create New Customer → fill the basics → pick **Blouse** and **Lehenga** → Next.

Say at the garment step: "Two garments, one order, and each asks only for what it needs. A blouse asks for armhole and hand rounding. A lehenga asks for floor length and waist finish. This is not one generic form with fields greyed out."

Click: set Blouse Type, Occasion, Trial Required = Yes (**then set the trial date — the wizard will not advance without it**), the measurements, and under *Materials & Accessories* pick the Kanchipuram Silk **from live stock** with a quantity.

Say: "That fabric line is your actual stock. It will be reserved and then consumed as production moves."

Click: Next → the AI Design Studio.

Say: "Suggestions ranked against this client's measurements, occasion, budget and past orders — with the reason on each card. It searches your own catalogue, your uploads and their previous orders."

Click: Add to board on one design per garment → Next → pick a fabric → Next → assign Lakshmi as Master and Ravi as Tailor, choose pickup → Next.

Result: The cost breakdown — per garment, plus packaging, discount, GST.

Click: Create Order & Pay → **Pay Partially Now** → advance amount → tick terms → Confirm Order & Continue.

Result: Order confirmed with an id, payment status and the tracking link.

Point: *Everything the floor needs is captured once, at the counter, and never re-keyed.*

If you are short of time, resume the wizard from a saved draft instead of filling it in live.

3.5 The floor — 3 min

Click: Log out → sign in as **Ravi Kumar** (tailor). **Say:** "This is the whole application for a stitching tailor. Two menu items. They see their orders, the measurements as ordered, the spec and the materials — and no prices, no other customer, no other order." **Click:** Stitching In Progress → Start In-Progress → comment → Complete Stage. **Result:** The stage times and credits itself to them.

Click: Log out → sign in as **Lakshmi Iyer** (master). **Say:** "The Master sees the whole floor and owns cutting, finishing and quality. Notice what they cannot do: they cannot touch a price." **Click:** the Master Production Verification Checklist. **Point:** *Each stage belongs to a role. Nobody can advance someone else's work, and every step is timestamped and attributed.*

3.6 The designer — 2 min

Click: Sign in as **Meera Nair**. **Say:** "A designer account is deliberately narrow — the brief and the garment spec, and no client name or money. That is enforced on the server, not just hidden in the menu." **Click:** My Work → the brief → Design Studio → the uploaded design. **Point:** *Freelance designers can be given access without giving away the client book.*

3.7 Inventory — 2 min

Click: Owner → Inventory → Items. **Say:** "The Kanchipuram Silk went in at 40 metres and reads 34.3. Nobody typed that. It is the 1.2 and 4.5 metres chosen on the two garment cards — reserved when the fabric was confirmed, consumed when it was stitched." **Click:** History on that item → the ledger. **Click:** Reports. **Point:** *Stock is a consequence of production, not a separate spreadsheet.*

3.8 Money — 1 min

Click: Invoices. **Say:** "Advance at the counter, balance at delivery, and the invoice carries your own boutique details." **Click:** View Invoice → Print Invoice (cancel the dialog). **Point:** *Be straight: payments are recorded here, not collected. There is no gateway.*

Watch the invoice line items. A garment line reads *Customer supplied fabric* unless a fabric cost was typed into the step-6 breakdown — even when the fabric came from your own stock. If you are demoing the invoice, fill the Fabric field in when you build the order. See §31.10 of the guide.

3.9 The customer's view — 2 min, the closer

Click: Manage Orders → the order card → Customer updates → copy the tracking link → paste it in tab 3, ideally on a phone.

Say: "This is what your customer sees. No app, no login, no password. Every stage, timestamped. The photographs, but only after the boutique publishes them. What they have paid, what is left, and where to collect."

Point: *This is the message that stops the daily "any update?" phone call — and it is the part a boutique owner buys.*

4. Ten-minute version

Public site (30 s)
↓
Owner dashboard (30 s)
↓
Customer record – versioned measurements + style profile (1 min)
↓
New order: two garments, per-garment forms, stock-linked materials (3 min)
↓ (resume a draft if pressed for time)
AI design suggestions with reasons (1 min)
↓
Tailor login – the narrow view, advance a stage (1.5 min)
↓
Inventory – 40 m → 34.3 m, nobody typed it (1 min)
↓
Invoice (30 s)
↓
Customer tracking link, on a phone (1 min)

5. Key points to land

Claim	Evidence to show
Built for stitch-to-measure, not adapted from retail	Per-garment forms; garment-specific measurements
One order, many garments	Blouse + Lehenga on T2B-260827-2925
Everyone works from the same record	Owner, Master, Tailor and customer views of one order
Roles are enforced, not decorative	The tailor's two-item menu; the designer with no client data
Stock is real	40 m → 34.3 m, with a ledger
Customers stop chasing you	The tracking link
Boutique data is isolated	Each tenant is its own schema

Do not claim

- Online payment collection — there is no gateway.
- Automatic WhatsApp — the product composes; a human sends.
- Try-On — it is a stock photograph picked by colour keyword.
- Pinterest / Google design search — both read *not connected*.
- That the invoice knows where the fabric came from — it infers it from the fabric price (\$31.10).

6. Backup and recovery during a demo

Problem	Fix
Next does nothing in the wizard	A required field is empty — almost always Trial Date after Trial Required = Yes
Signup looks frozen	Normal: schema creation takes 20–45 s. Do not reload.
You are half way through a wizard and out of time	Save as Draft , then Resume later from the New Custom Order screen
The demo order got advanced or delivered mid-demo	It is already Delivered; that is the intended resting state. Create a fresh order to demo production.
You lost track of which role you are	The header greets you by name; the sidebar length gives it away
Everything looks empty	You are signed in as the wrong role, or a filter is still applied
Try-On shows a broken image	Expected offline — use it as the honest framing (\$20 of the guide)
The data is gone	Re-seed by re-running the capture steps in order: <code>signup</code> , <code>seed_staff</code> , <code>seed_designer</code> , <code>seed_fabrics</code> , <code>seed_designs</code> , <code>seed_inventory</code> , <code>seed_stock</code> , <code>create_order</code> , <code>assign_design_work</code> , <code>designer_upload</code> , <code>owner_review_design</code> , <code>run_production</code> , <code>taylor_production</code> , <code>master_production_late</code> , <code>settle_payment</code> , <code>owner_order_wrapup</code> , <code>deliver_order</code> , <code>owner_appointments</code> — each is <code>python3 docs/user-guide/capture.py <name></code>

Reset to a clean boutique

Sign up a new boutique with a fresh email and run the seed steps above against it. Nothing in the demo data is required by the application.
